

# WFO UI update

23/9/2026, Dublin

Wouter Huisman, SURF

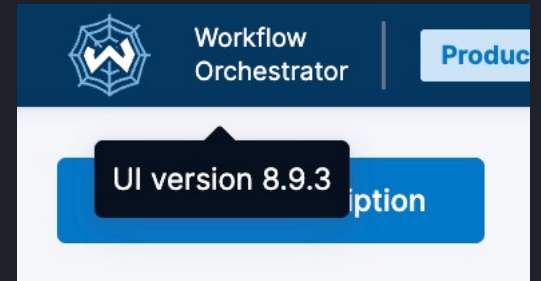

# Topics

- New UI features
- New search with option for semantic search
- New table proposal: bulk edit

# New GUI features

- Quick action menu on subscription list
- Last run validation tasks in subscription detail
- Note field per task and workflow
- Subscription Delta view for modify workflows
- Pydantic
- [SURF] Workflow user guides
- [SURF] Toggle input field

# Reconcile workflow

- “Refresh” the subscription data in all sub-systems, like IMS, NSO, IPAM, RIPE
- Useful is if things get out of sync, and you want to enforce the existing state again.
- Reconcile runs a modify workflow without any change (the so-called no-op modify workflow)
- **New!** Can be run on out-of-sync subscriptions

Actions ▾

## Modify workflow

-  Modify Subscription References and Permissions
-  Move Service Port
-  Modify Service Port: Change Port Mode
-  Migrate Service Port to Aggregated Service Port
-  Modify Note
-  Resend Email
-  Modify Service Port

## Tasks

-  Validate Service Port subscription

## Reconcile workflow

-  Reconcile SN8 Service Port

## Terminate workflow

-  Terminate Service Port

# Hot of the press

**Check data in IMS**

success - 9/22/2026, 3:00:03 PM

**Check node subscription matches IMS**

failed - 9/22/2026, 3:00:04 PM

**Check node subscription matches IMS**

failed - 9/22/2026, 3:10:38 PM - retry: User Test

**Check node subscription matches IMS**

failed - 9/22/2026, 3:11:13 PM - retry: User Surf

**Check node subscription matches IMS**

failed - 9/22/2026, 3:11:21 PM - retry: User Test

**Check node subscription matches IMS**

failed - 9/22/2026, 3:11:26 PM - retry: User Surf

**Check node subscription matches IMS**

success - 9/22/2026, 3:14:09 PM

# Pydantic form update

- Boolean field
  - Fix: Mandatory boolean could not be unchecked
  - Now three states, add **undefined/unspecified**
- New callout component supporting Markdown

L2VPN settings

## L2VPN Configuration

An **L2VPN** (Layer 2 Virtual Private Network) connects multiple sites over the SURFnet8 network using Ethernet bridging.

- Each ESI group requires **at least one service port**
- VLAN retagging allows different VLAN IDs per endpoint
- The BUM filter limits broadcast/multicast to **10% of port speed**
- A firewall L2 endpoint can optionally be attached

<https://confluence.ja.surf.nl/display/SIUBENOC/modify+I2ypp>

+

SURF only  
To be added in WFO

© 2026 - workfloworchestrator.org

# Workflow User Guides

- User guides are stored as markdown files in orchestrator
- Set env variables
  - orchestrator-ui
    - SHOW\_WORKFLOW\_USER\_GUIDE: "true"
  - orchestrator
    - WORKFLOW\_USER\_GUIDE\_DIR: docs/ai-generated/workflow-guides (in surf)
- The old information link can be activated by:
  - orchestrator-ui
    - SHOW\_WORKFLOW\_INFORMATION\_LINK: "true"
    - WORKFLOW\_INFORMATION\_LINK\_URL:  
<https://confluence.ia.surf.nl/display/SURFNOC/>

# In SURF: Toggle component

- New CSS style applied to forms (in ui-lib 8.9.3)
- Render toggle instead of checkbox
  - Should this be included in the opensource lib?

# New search functionality

- Replace TSV search by Ltree index

# Issue with the old/TSV search

- Could not handle certain characters, like “:”
  - Search op IPv6 address not possible
- Search on subscription instance ids not possible
- Only exact match possible
  - On wildcards only at the end of string, like “test\*” in subscription table
- Requires domain knowledge to find certain subscriptions on the “internal” attributes
  - Filter on resource type: “port\_mode true”
- Subscription search differs from task/workflow search

# Demo

Remove filter Apply filter

**queryString**

**filterString**

# UI search - good to know

- Search is included in url and contains the filter and query
  - subscriptions?queryString=bla1&filterString=path\_index+<operator>bla2
- The **Filter component** is using structured filtering and returns total # of rows
  - Match field confidence is 100%
- The **SearchField** will not return a total number
  - Match field confidence is < 1
- No # of rows if **queryString** is used
  - Thus no sorting supported!

# New search concept

- Each field is mapped to a row with a Ltree indexed path in coreDB
  - Structured search based on path, operator and value
- String fields will be using embeddings in the pgvector column
  - Optional, offers semantic search
    - Set `EMBEDDING_API_ENABLED` to true
- Works for any table/page in orchestrator
- Can be used by AI agents with the semantic search

# Indexing

- Two new tables in coreDB
  - ai\_search\_index
    - Contains all data values per Ltree path
      - Optionally embedding is inserted
    - For different entities subscriptions, processes, product, workflows
  - ai\_search\_paths
    - Defines unique paths
  - Both tables are updated:
    - When the process exits, for success and failure
    - After updates via API Rest endpoints
    - Alembic migrations
    - CLI

# ai\_search\_index table

| Column                         | Type                                     | Purpose                                                                                         |

# Number of rows in ai\_search\_index

The number of rows is depending on the domain model, and all depending products involved. Higher in the stack will result in more rows

For example

- Node 31 rows
- SP 46 rows
- Corelink 75 rows
- L2VPN 99 rows
- IP 163 -475 rows → very high number of connected prefixes
- FW 421 rows

# ai\_search\_paths

- unique list of ltree paths of the ai\_search\_index
  - Used to populated the dropdown in the UI
  - And provide field type to specify which operator can be applied

|    | entity_type<br>[PK] text | path<br>[PK] ltree                     | value_type<br>[PK] field_type | refcount<br>integer |

# Bulk edit function mocks

- Request to run multiple actions on failed tasks
  - Retry a subset of the failed tasks
- Introduce bulk edit on the wfo table component
  - it could be valuable for actions like
    - retry task, abort task, delete task.
  - could be implemented on the subscription list page supporting
    - set in sync, validate subscription, reconcile subscription
